ACMA at ProSweets: presenting the latest solutions for confectionery wrapping processes

Acma will take part in the next ProSweets exhibition in Köln, from January 29th until February 1st, expressing its increasingly commitment and know-how in the sweet sector.

In January, Acma's confectionery department and M.C. Automations, its division for chocolate, will attend the main exhibitions worldwide, presenting the latest packaging technologies, to confirm their role as leading manufacturers of highly flexible and reliable wrapping machines. As for what concerns the ProSweets fair, a new machine, the M888, will be present: a patented multistyle automatic wrapping machine suitable for a wide range of chocolate and pre-formed confectionery products.

The **M888** combines the benefits of continuous motion - namely higher speed and delicacy in handling the product during the feeding phase - with those of alternated motion, which guarantees greater precision during the wrapping process. Not only it is one of the fastest multi-style machine on the market (the production speed is up to 1000 pieces per minute), but it is also extremely flexible: the wrapping style and size change over can be accomplished in less than 80 minutes. Finally, the M888 can be used to pack plain, filled or crumbly products with the following packaging styles: "Vienna Bon Bon" (pointed-end-fold), fancy, double twist, envelope and top and side twist. Gentle and smooth product handling is provided by Acma's complete range of feeding and distribution systems, suitable for high speed and offering true cantilever construction and fast "tool-less" belt changing.

ACMA will be present in the Hall 10.1, booth number: G 078

Acma is a member of Coesia group. The Group consists of 13 leading companies operating in the areas of automatic packaging machines, quality control, printing systems and precision gears. The consolidated turnover of Coesia group is nearly 900 hundreds million euro, with 3900 employees and many facilities operating worldwide.
